AdaptIQ – We adapt for you

AdaptIQ helps teachers turn static materials into engaging practice for students.

CHALLENGE

Learning platforms could be hard for teachers and boring for students – so most course material just sits there unused. AI chatbots could help, but they make things up, so schools won't let them in.

SOLUTION

The learning platform teachers enjoy using. Upload your course and AdaptIQ turns it into a game-like app students love: daily goals, streaks, exam practice and an AI tutor that answers only from your material.

INVESTMENT HOOK

Imagine every course as a learning app students open every day, created by teachers themselves, no developers needed. AdaptIQ is already live with 160 medical students at the University of Pécs, and the same engine works for any subject, school or company.

WE ARE SEEKING FOR

Investors to scale AdaptIQ from Pécs across the country and abroad.

Pilot & sales partners – universities, schools and companies that want their own learning app.
